

CARE AND MAINTENANCE OF THE CABLESTRADE™ SYSTEM.

Thank you for purchasing the Cabletrade™ Handrail System. Maintaining your new handrails - pool fencing will ensure you can enjoy the clean unobstructed views this system offers for many years to come.

The Myth ... because its stainless steel you don't have to clean it, this could not be further from the truth.

One of the main reasons stainless steel is used is because of its high resistance to corrosion. However, stainless steel does suffer from "localized" corrosion mainly due to the lack of maintenance through incorrect grade selection.

Rust Marks - Tea Staining - Localized Corrosion.

Tea staining occurs within approximately 5 kilometres of the ocean and becomes progressively worse close to the ocean.

Industrial, commercial and even domestic and naturally occurring atmosphere conditions can result in minute particle deposits which can contaminate the surface of the stainless steel.

Tea staining does not affect the structural integrity or the longevity of the material and it can be controlled with regular cleaning.

Maintenance

Stainless steel will hold its appearance and remain free of tea staining if it is washed regularly. Washing removes contaminants. For best results, wash with soap or mild detergent and warm water. Follow by rinsing with clean water. The appearance of the surface can be improved further if the washed surface is wiped dry.

How often should you clean stainless steel?

If it is obviously dirty or you notice tea staining beginning it should be cleaned as soon as possible. Obviously some locations will require cleaning more often than others. Remember, regular cleaning is always the best option.

Tips to Remember.

1. Regular cleaning is the best option
2. Ordinary household cleaners with low chloride and plenty of water are ok to use.
3. Do not use hydrochloric acid or similar on the product
5. Never use steel wool
6. Always use clean water
